Dear _ , Boosting user experience scores by 55% at Nextor, Inc. was one of my proudest moments. I believe I can top that as a computer science professional at Google. Google is renowned for its extremely competent and intelligent employees. Here are ways I believe I fit that description well: Prototyped 26 new product features each year at Nextor, Inc. Led three DevOps teams of four employees each. Decreased rework 25% through directed best practice implementation. With seven years of computer science experience, I'm ready to take the next step with the world's greatest tech company. I'm excited to see how I can grow my skills and value in the rich environment Google provides. Can we pick a time to discuss how my work at Nextor can convert to an enhanced experience for Google's users? Best Regards, _
